DETAILED ACTION

Status of Application, Amendments, and/or Claims

1. The Preliminary Amendment filed 13 April 2004 has been received and entered in full.

Election/Restrictions

- 2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 3, 5, and 7, drawn to a method of treatment of cystic fibrosis (CF) in a patient comprising administering an agent, classification dependent upon agent structure.
 - II. Claims 2, 4, 6, and 8, drawn to a method of treatment of chronic obstructive pulmonary disease (COPD) in a patient comprising administering classification dependent upon agent structure.
 - III. Claim 9, drawn to a composition comprising a <u>secretin receptor ligand</u> together with a least one other compound active against *cystic fibrosis*, classification dependent upon agent structure.
 - IV. Claim 10, drawn to a composition comprising a <u>secretin receptor ligand</u> together with a least one other compound active against *chronic obstructive pulmonary disease*, classification dependent upon agent structure.
- 3. The inventions are distinct, each from the other because of the following reasons:
- 4. Although there are no provisions under the section for "Relationship of Inventions" in M.P.E.P. § 806.05 for inventive Inventions that are directed to <u>different</u> methods, restriction is

Art Unit: 1647

reactions control realities. 10/022,0

deemed to be proper because these methods appear to constitute patentably distinct inventions for the following reasons: Inventions I and II are directed to methods that are distinct both physically and functionally, and are not required one for the other. Invention I requires search and consideration of *cystic fibrosis*, which is not required by Invention II. Invention II requires search and consideration of *chronic obstructive pulmonary disease*, which is not required by Invention I.

Page 3

- Although there are no provisions under the section for "Relationship of Inventions" in M.P.E.P. § 806.05 for inventive groups that are directed to <u>different</u> products, restriction is deemed to be proper because these products constitute patentably distinct inventions for the following reasons. Inventions III and IV are directed to products that are distinct both physically and functionally, are not required one for the other, and are therefore patentably distinct. The composition of Invention III is independent and distinct from the product of Invention IV because it is not required to make or use the composition of Invention III. The composition of Invention IV is independent and distinct from the product of Invention III because it is not required to make or use the composition of Invention IV.
- 6. Inventions III and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the agent of Invention III can be used in a screening assay to identify binding partners.

Art Unit: 1647

7. Inventions IV and I are unrelated. Inventions are unrelated if it can be shown that they

are not disclosed as capable of use together and they have different modes of operation, different

Page 4

functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different

inventions of Inventions IV and I are unrelated product and method, wherein each is not

required, one for another. For example, the claimed method of Invention I does not recite the use

or production of the therapeutic COPD agent of Invention IV.

8. Inventions IV and II are related as product and process of use. The inventions can be

shown to be distinct if either or both of the following can be shown: (1) the process for using the

product as claimed can be practiced with another materially different product or (2) the product

as claimed can be used in a materially different process of using that product (MPEP

§ 806.05(h)). In the instant case the agent of Invention IV can be used in a screening assay to

identify binding partners.

9. Inventions III and II are unrelated. Inventions are unrelated if it can be shown that they

are not disclosed as capable of use together and they have different modes of operation, different

functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different

inventions of Inventions III and II are unrelated product and method, wherein each is not

required, one for another. For example, the claimed method of Invention II does not recite the

use or production of the therapeutic CF agent of Invention III.

10. The Examiner has required restriction between product and method claims. Where applicant

elects claims directed to the product, and a product claim is subsequently found allowable, withdrawn

method claims that depend from or otherwise include all the limitations of the allowable product claim

will be rejoined in accordance with the provisions of MPEP § 821.04. Method claims that depend

Art Unit: 1647

from or otherwise include all the limitations of the patentable product will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier.

Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

- 11. In the event of rejoinder, the requirement for restriction between the product claims and the rejoined method claims will be withdrawn, and the rejoined method claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103, and 112. Until an elected product claim is found allowable, an otherwise proper restriction requirement between product claims and method claims may be maintained. Withdrawn method claims that are not commensurate in scope with an allowed product claim will not be rejoined. See "Guidance on Treatment of Product and Process Claims in light of *In re Ochiai, In re Brouwer* and 35 U.S.C. § 103(b)," 1184 O.G. 86 (March 26, 1996). Additionally, in order to retain the right to rejoinder in accordance with the above policy, Applicant is advised that the method claims should be amended during prosecution either to maintain dependency on the method claims or to otherwise include the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder.
- 12. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the Examiner before the patent issues. See MPEP § 804.01.

Art Unit: 1647

Page 6

Applicant is advised that the reply to this requirement to be complete must include an

election of the invention to be examined even though the requirement be traversed (37 CFR

1.143).

13.

Because these inventions are distinct for the reasons given above and have acquired a 14.

separate status in the art because of their recognized divergent subject matter, separate search

requirements, and/or different classification, restriction for examination purposes as indicated is

proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the

inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

currently named inventors is no longer an inventor of at least one claim remaining in the

application. Any amendment of inventorship must be accompanied by a request under 37 CFR

1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 1647

Conclusion

Page 7

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher James Nichols, Ph.D. whose telephone number is (571) 272-0889. The examiner can normally be reached on Monday through Friday, 8:00 AM to 5:00 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brenda Brumback can be reached on (571) 272-0961.

The fax number for the organization where this application or proceeding is assigned is 703-**872-9306**.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
